Buildout: track record and tear sheet

Model book, not personal positions. Data through 2026-11-05. Research only; not investment advice.

1. Backtest (in-sample)

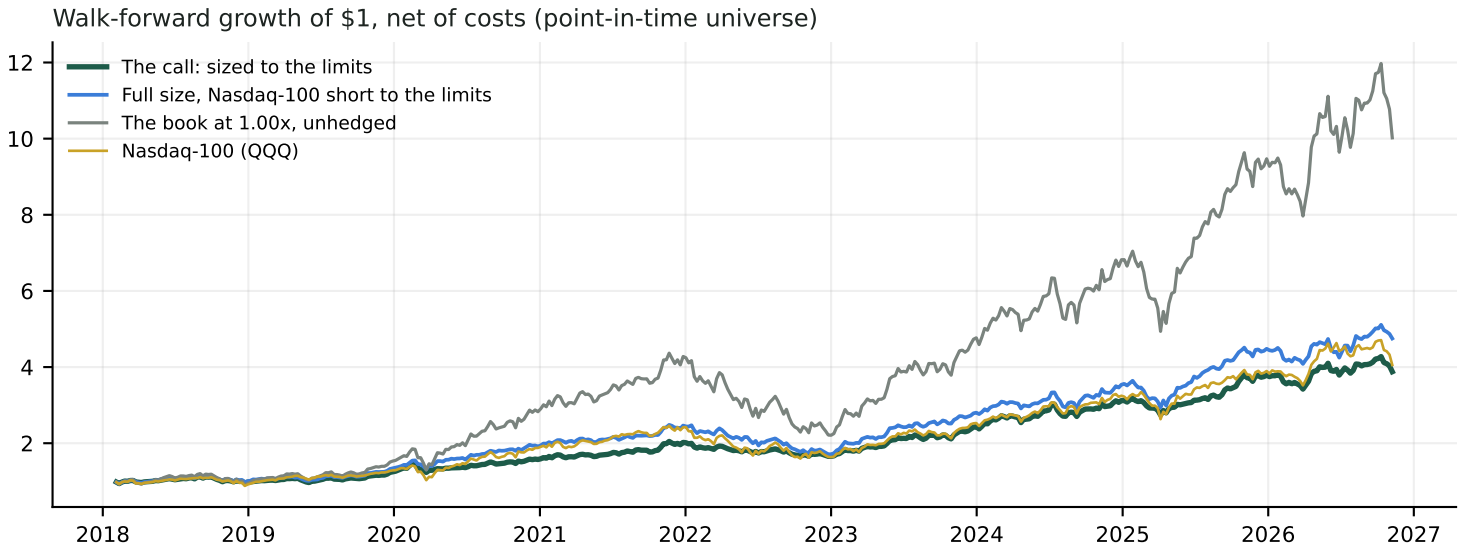

Size 0.53x, chosen with the whole history and applied to it: hindsight on the names and the size. CAGR 18.8%, volatility 16.2%, max drawdown 26.5%.

2. Walk-forward (out-of-sample)

Size and hedge recomputed each month-end from data to that close, held the next month, costs charged; universe chosen point in time each January. 2018-02-02 to 2026-11-05.

3. Live paper

4 call(s) in the hash-chained ledger, the first governing from 2026-11-04; 2 days marked.

Nasdaq-100 (QQQ)	17.4%	17.4%	23.9%	0.67	35.1%	63%		1.00		-32.6%

Costs: stocks 5 bp per dollar traded; Nasdaq-100 futures 1 bp a trade plus 1 bp a quarter to roll; borrowing above 1.00x at cash plus 50 bp; the long bond 2 bp a trade. Sharpe is in excess of cash; betas from a daily regression on the Nasdaq-100 and the 20-year bond.

Survivorship: today's nine held with hindsight grew 30.6% a year, the point-in-time nine 30.2% (gap 0.4 points); hindsight flatters risk more than return (worst drawdown 47% against 51%).

Sizing: vol target with quarter Kelly averaged 0.21x gross: the same bet, smaller. The call keeps the holding's Sharpe and cuts the worst drawdown from 51% to 20%.
